Defence & Security · GS - III

Examine the importance of inter-agency coordination in combating drug trafficking along India's international borders.

EXAM YEAR	PAPER	SUBJECT
DAILY PRACTICE 28/11/2026	GS - III	Defence & Security

MARKS	WORD LIMIT
15	~250 words

Answer Hint

Border management, BSF, State Police, intelligence-sharing, NDPS Act, organised crime, narcotics networks, regional security

Model Answer

Drug trafficking is a serious internal security challenge because organised networks exploit international borders, transport corridors and local distribution channels. Recent seizures through joint operations involving the Border Security Force (BSF) and State Police highlight the importance of institutional coordination.

Why coordination is essential:

1. **Intelligence integration:** Sharing actionable intelligence helps agencies identify trafficking routes, suspicious consignments and organised networks.

2. **Border surveillance:** The BSF's border presence enables early detection of suspicious cross-border movement and trans-border criminal activities.

3. **Effective investigation:** State Police can investigate local networks, trace supply chains, arrest suspects and collect evidence under applicable laws.

4. **Legal enforcement:** The NDPS Act, 1985 provides the framework for controlling narcotic drugs and psychotropic substances, including offences relating to illegal possession and trafficking.

5. **Network disruption:** Coordinated investigations can identify financial links, transport operators and wider criminal connections rather than focusing only on individual seizures.

However, jurisdictional clarity, forensic capacity, secure intelligence-sharing and timely prosecution remain important requirements.

Conclusion

India needs an integrated anti-narcotics strategy combining border vigilance, intelligence-led policing, financial investigation and regional cooperation. Such coordination can strengthen national security while addressing the wider social consequences of drug abuse.
